

# Optimize your supply of spare parts and consumables

## CRITICAL SPARE PARTS:

Avoid production standstill if you carry no stock.

## RECOMMENDED SPARE PARTS:

Avoid production standstill or reduced speed & volume.

## SPARE PART AUDIT:

We audit your parts, plan for long lead times and obsolescent parts.

## SUPPLY AGREEMENT:

Based on your needs we deliver all parts in time.

### Consumables arriving on your doorstep

To reduce the length of unplanned stops and secure availability of consumables for planned stops, we offer our customers recommended spare parts packages and automatic deliveries of frequently used consumables on time, in the quantity and the quality required. We also supply pre-cut doctor blades in any requested length - ready for use.

We advise all customers to stock a recommended spare part package covering any critical parts:

- Recommendation for spare part inventory – avoid downtime
- Audit of spare parts – we investigate lead times, recommended inventory and obsolescent parts
- Supply agreements - based on your needs we design a subscription for consumables arriving on your doorstep in time.

### Stock recommended parts

Especially in situations with a high number of printing units, it might be worthwhile to establish due planning of deliveries to avoid idle time waiting for parts. Parts can be ordered directly from our online Webshop working 24/7 and can also be ordered and supplied in larger quantities on demand if needed.

### Identify obsolescence and have contingency plans and parts ready

Based on a thorough check of all critical components – from wear parts to electrical components - we can help customers make plans to avoid obsolescence. Lately electrical parts have been in very high demand as the manufactured output supplied to the world market has fluctuated quite a lot. Our audit will identify any obsolete parts and together we plan the right course of action to reduce risk of downtime due to discontinued components and where needed TRESU will develop an obsolescent upgrade ensuring extended performance of the press.
